CHAPTER 20 Static Electricity - Yola

a long metal rod from silk threads so that the rod is isolated You then touch a charged glass rod to one end of the metal rod Describe the charges on the metal rod The glass rod attracts electrons off the metal rod, so the metal becomes positively charged The charge is distributed uniformly along the rod 7 Charging by Friction You can

EC69-460 As you Sew with Suitable Thread

1 Threads made of a plant fiber, such as cotton, are best suited for cotton and linen fabrics Silk thread is recommended for use in sewing both silk and fine wool Both are animal fibers and react similarly to cleaning, weather conditions and dyes Silk thread is also elastic and strong

Physics 4B Homework assignment set 1 for electric charge ...

2 Two similar small conducting balls each of mass m are hung from silk threads each of length l and carry similar charges q and are in equilibrium Assume that the angle of separation between the two threads is a small angle θ Find the charge on one ball There is gravity in this problem 3

The Making of a Mala - Beadworld

30 yards of thin fiber such as cotton, linen, silk or bamboo - we don't use the synthetic threads because they tend to splay out and hang stiffly 3 inch jewelry box You may have noticed malas have no clasp so start stringing from the bottom, just before the focal bead

Exam 3 - University of Massachusetts Amherst

A particular species of spider spins a web with silk threads of density 1300 kg/m^3 and diameter $30 \text{ }\mu\text{m}$. A typical tension in the radial threads of such a web is 70 mN . If a fly lands in this web, which will reach the spider first, the sound or the wave on the web silk? Traveling wave problem. Know: $\rho = 1300 \text{ kg/m}^3$, $d = 30 \text{ }\mu\text{m} = 30 \cdot 10^{-6} \text{ m}$, $T = 70 \text{ mN}$.

Cobweb-weaving spiders produce different attachment discs ...

acts as a 'catching net' for flying prey, the gumfoot silk threads pull walking prey off the ground and into the web. This requires that, upon agitation by the momentum of the incoming prey, the scaffolding silk remains firmly attached to the substrate while the gum-foot silk threads easily detach from the surface.

Directory | National Superconducting Cyclotron Laboratory ...

A particular species of spider spins a web with silk threads of density 1300 kg/m^3 and diameter $30 \text{ }\mu\text{m}$. A typical tension in the radial threads of such a web is 0.007 N . What is the speed of the waves traveling on the web, If a fly lands in this web, which will reach the spider first, the sound or the wave on the web silk? (sound velocity = 343 m/s)
